

Your INL Update — Week of March 1, 2010

This is Misty Benjamin with your INL Update.

Female eighth-graders from Idaho Falls, Bonneville County and Twin Falls are exploring science and technology career options at Idaho National Laboratory this week. INL hosts the third annual My Amazing Future seminar and tour series Tuesday. A full day of workshops, discussions and demonstrations will highlight different career options within the sciences.

You can see how students explored science, technology, engineering and math concepts at recent expos in the Treasure Valley in a new feature on INL's Web site. A slide show from the expos shows students of all ages building and experimenting at a host of activities.

You can see what INL is doing to help find solutions to the nation's energy challenges in a new overview video on INL's home page. The lab's people, facilities and research missions are highlighted in the nine-minute video, which was recently produced by a local subcontractor.

This was your INL Update. You'll find more information at INL.gov, including community announcements and the latest INL news.
