

## **Your INL Update — Week of March 28, 2011**

This is Misty Benjamin with your INL Update.

Students from across Idaho will be going to Washington, D.C. Scholastic tournament teams from Rexburg, Coeur d'Alene and Challis will compete in the U.S. Department of Energy's National Science Bowl. Madison High School, Coeur d'Alene Charter Academy and Challis High School won Idaho National Laboratory Scholastic Tournament state championships, which earned them spots in the national competition.

Community members recently joined INL employees at the premier of "Energy on Trial," a new film by Gary Jobson. Just as conversations about energy sources intensify, especially in light of the recent nuclear energy crisis in Japan, Jobson is debuting a thoughtful documentary about energy choices. You can read more in a new feature story on INL's home page.

The future of U.S. reactor technology in the aftermath of events in Japan will be the focus of Idaho Public Television's Dialogue program this week. INL Laboratory Director John Grossenbacher will discuss what this event means for the future of the nuclear industry and INL.

This was your INL Update. You'll find more information at [inl.gov](http://inl.gov), including community announcements and the latest INL news.
