

Your INL Update — Week of June 7, 2010

This is Misty Benjamin with your INL Update.

More than a hundred researchers from across the country and around the globe are visiting Idaho National Laboratory this week. The Advanced Test Reactor National Scientific User Facility is holding its annual Users Week, which highlights collaborative nuclear research using INL's unique capabilities.

INL employees will be among those attending the upcoming Idaho Falls City Club presentation by Rachel Martin. Martin is an NPR national security correspondent and former ABC World News with Diane Sawyer correspondent. The Idaho Falls City Club has more information on its website about attending this event.

Biodiesel made from wastes, medical imaging from better radioisotope production and significantly improved gunsight optics are INL innovations that the lab nominated for R&D Magazine's annual competition to select the top 100 new technologies. You can watch videos and learn more about the technologies at INL's home page.

This was your INL Update. You'll find more information about community announcements and the latest INL news at INL.gov.
