

## **Your INL Update — Week of July 12, 2010**

This is Misty Benjamin with your INL Update.

A Blue Ribbon Commission subcommittee meets in Idaho Falls this week to gather information, listen to presentations and hear from the public. Idaho National Laboratory Director John Grossenbacher is presenting an overview of lab history, facilities and operations to the group, which focuses on reactor and fuel cycle technologies.

INL researchers have been honored with three R&D 100 Awards. R&D Magazine's annual competition is sometimes referred to as the "Oscars of Invention." INL's winning technologies turn waste grease into biofuel, help marksmen improve their aim and enable 3-D computer environments for researchers.

INL employees will join area businesses and community members Friday to support the Great Race for Education. The scavenger hunt through downtown Idaho Falls is a fundraiser for student scholarships at Eastern Idaho Technical College.

This was your INL Update. You'll find more information at [INL.gov](http://INL.gov), including community announcements and the latest INL news.
