

Your INL Update — Week of Sept. 27, 2010

This is Misty Benjamin with your INL Update.

Idaho National Laboratory supports local teachers as they take real-world experiences into the classroom. From lessons learned in a professional lab environment to trudging up a hillside to collect data from a wind farm; local teachers spent some of their summer investing in their teaching techniques. You can read about their experience in the features section of INL.gov.

Another learning opportunity, this time for the community, Decoding da Vinci is open to the public this week at the Museum of Idaho. INL is a sponsor of the exhibit that profiles the work of Leonardo da Vinci with family-friendly, hands-on activities, original documents and reproductions of his visionary work.

Reporters from Dan Rather Reports and a Washington, D.C., energy publication will be touring INL this week. One reporter will interview a retired employee about earlier contributions of engineers and scientists at INL. The other reporter will learn about the site's contributions to nuclear energy research, development and deployment.

This was your INL Update. You'll find more information at INL.gov, including community announcements and the latest INL news.
