

Your INL Update — Week of Nov. 15, 2010

This is Nicole Stricker with your INL Update.

Local school children will get some expert judges at their 5th grade science fair this week. Ten Idaho National Laboratory employees are volunteering to judge student science projects Thursday at Edgemont Gardens Elementary School. The budding scientists will be awarded prizes and participation certificates.

Do you find it challenging to keep up with your car's maintenance schedule? Imagine tracking such information for 650,000 vehicles. To help the federal government meet that challenge, INL developed a Web tool that is so efficient, it's leading the way for government agencies and contractors. You can learn more about this cool tool in a new feature story on INL's home page.

Powering Idaho's future is a hot topic this week at the inaugural Sustainable Energy Conference in Twin Falls. Participants are learning about southern Idaho energy projects that include geothermal, hydropower, wind energy and biofuels. INL is a primary sponsor and you can learn more at the Idaho Economic Development Association's website.

This was your INL Update. You'll find more information at INL.gov, including community announcements and the latest INL news.
